According to our (Global Info Research) latest study, the global Automated Intralogistics Solution market size was valued at US\$ 30267 million in 2025 and is forecast to a readjusted size of US\$ 50734 million by 2032 with a CAGR of 7.6% during review period.

Automated Intralogistics Solution refers to an integrated solution within an enterprise that optimizes processes such as receiving, storage, picking, handling, sorting, distribution, and outbound shipments, focusing on the flow of raw materials, semi-finished products, finished products, containers, pallets, and related information. It utilizes automated equipment, robotic systems, warehousing systems, and software platforms. Typical components include conveyor systems, AS/RS (Automatic Storage and Retrieval System), sorting systems, AGVs/AMRs (Automated Guided Vehicles/Autonomous Mobile Transporters), automated forklifts, picking workstations, WMS/WCS/WES (Warehouse Management System/Warehouse Control System/Warehouse Execution System), and interfaces with ERP/MES (Enterprise Resource Planning/Management System). The core objective is to improve the efficiency, accuracy, traceability, and flexibility of internal logistics. The mainstream industry definition generally understands intralogistics as the management of material and information flow within an enterprise, rather than in external transportation links.

Automated internal logistics is shifting from 'equipment automation' to 'system-wide collaborative automation.' More and more companies are moving beyond simply purchasing individual pieces of equipment, instead unifying warehousing, handling, sorting, picking, and software scheduling, emphasizing end-to-end process integration, real-time visualization, and system-level optimization. Along this path, the importance of

software orchestration, multi-device collaboration, digital simulation, and data-driven decision-making continues to rise.

AI, robotics, and flexible automation are rapidly penetrating the market. Industry observations around 2025 generally indicate that investment in warehousing and internal logistics is being driven by labor shortages, increased accuracy requirements, space utilization optimization, and operational resilience needs; simultaneously, the deployment of digital twins, real-time inventory tracking, Robots as a Service (RaaS), and more flexible mobile robots is increasing.
