Abstracts

The global Automated Laser Marking Machine market size is expected to reach \$ 2338 million by 2032, rising at a market growth of 4.8% CAGR during the forecast period (2026-2032).

Automated Laser Marking Machine is a machine that uses a laser beam to permanently mark various surface materials. Laser marking machines employ dynamic and highly flexible processes, enabling high-speed marking of characters, logos, graphics, barcodes, and two-dimensional data matrices. Laser markings are clear and easy to read, leaving permanent marks that provide effective traceability and can withstand harsh environmental conditions. Data from auxiliary equipment (such as computer control systems) is not included in the data analysis.

Market Drivers:

1: Traceability and regulatory compliance

The strongest structural driver is product traceability. Medical devices, automotive parts, aerospace components, EV batteries, electronics, and industrial tools increasingly require permanent serial numbers, QR codes, DataMatrix codes, batch numbers, and anti-counterfeit identifiers. FDA UDI direct-marking rules are a clear example in medical devices.

2: EV batteries and battery passport requirements

EV and industrial batteries are becoming a major marking application. EU Regulation 2023/1542 requires battery information to be available through QR codes, and the QR

code should provide access to a battery's product passport. This supports demand for reliable laser QR marking on battery cells, modules, packs, and labels.

3: Expansion in electronics and semiconductors

Miniaturization and dense component identification increase the need for high-precision marking. Applications include PCBs, IC packages, connectors, sensors, housings, chargers, mobile devices, and electronic components.
