Abstracts

According to our (Global Info Research) latest study, the global Automated Liquid Handling market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Automated Liquid Handling systems are also commonly known as pipetting workstations, pipetting robots or as Liquid Handlers. They perform programmed transfer of liquid volumes between various source and destination vessels, but additionally can perform temperature incubation, mixing or even magnetic or vacuum based separations.

Automated Liquid Handlers is used in automation of Pharmaceutical or biochemical laboratories. It is a robot that dispenses a selected quantity of reagent, samples or other liquid to a designated container.

Reducing processing time, decreasing sample contamination, and increasing accuracy in bioassays is possible with Automated Liquid Handler. These systems release researchers from long, repetitive, laborious tasks, and free up time for other assays, lab reports and other lab duties. Robotic arms distribute accurate measurements of liquids to vessels, such as microtiter plates and change out plates or tubes, thus streamlining workflow.
