Microplate centrifuge is a clinical testing instrument used to centrifuge samples in microplates. It is efficient, accurate, and convenient, and is widely used in clinical laboratories, biomedical research, and other fields. Microplate centrifuge consists of a host, a rotor, and a control system. The host is the core component of the centrifuge, responsible for providing centrifugal force and speed control. The rotor is a rotating component installed on the host, used to place microplates and samples. The control system is used to set centrifugation parameters, such as speed, time, etc.
