## Abstracts

According to our (Global Info Research) latest study, the global Automated Parking Systems market size was valued at USD 2405.7 million in 2023 and is forecast to a readjusted size of USD 3169.9 million by 2030 with a CAGR of 4.0% during review period.

An automated (car) parking system (APS) is a mechanical system designed to minimize the area and/or volume required for parking cars. Like a multi-story parking garage, an APS provides parking for cars on multiple levels stacked vertically to maximize the number of parking spaces while minimizing land usage. The APS, however, utilizes a mechanical system to transport cars to and from parking spaces (rather than the driver) in order to eliminate much of the space wasted in a multi-story parking garage. While a multi-story parking garage is similar to multiple parking lots stacked vertically, an APS is more similar to an automated storage and retrieval system for cars.

Global Automated Parking Systems key players include ShinMaywa, IHI Parking System, MHI Parking, XIZI Parking System, Wuyang Parking, etc. Global top five manufacturers hold a Production Market Share over 25%. China accounts for the most Production Market Share, which have a share over 40%, followed by Japan. In terms of product, Multi Parking is the largest segment, with a Production Market Share over 70%. And in terms of application, the largest application is Commercial, followed by Residential.
