Automated Pest Monitoring Systems are systems based on automation technology used for real-time monitoring and control of pest activity, including insects and rodents. These systems automatically capture activity data through sensors, image recognition, or other advanced technologies, transmitting the information in real-time to management platforms. These systems help users in agriculture, food storage, warehouses, and public health sectors achieve precise pest control, reduce manual inspections, improve monitoring efficiency, and ensure timely intervention.

The global market for Automated Pest Monitoring Systems is steadily growing, driven by the increasing demand for efficient and eco-friendly pest control in agriculture, the food industry, and public health sectors. With the development of smart agriculture, IoT, and big data technologies, automated pest monitoring systems have become an essential part of modern pest control. The Asia-Pacific region, particularly China, India, and Southeast Asia, is the primary growth area for this market, driven by large-scale agricultural production and the rapidly developing smart agriculture sector. Meanwhile, the North American and European markets are more focused on technological innovation, intelligent solutions, and data-driven pest control. Overall, the market is shifting from traditional manual management to smart and automated solutions, and it is expected to continue growing in the coming years.
