Abstracts

The global Automated Screw Feeding System market size is expected to reach \$ 3356 million by 2032, rising at a market growth of 10.4% CAGR during the forecast period (2026-2032).

Automated Screw Feeding System refers to equipment and integrated modules used to automatically store, sort, orient, separate, dispense, blow-feed, present, or deliver screws to a screwdriver bit, tightening head, robot end-effector, pick-up position, or assembly workstation. These systems are used to reduce manual screw handling, shorten fastening cycle time, improve assembly consistency, and support semi-automatic or fully automatic screwdriving processes. In this report, the market mainly includes automatic screw feeders, screw presenters, vibratory bowl screw feeding systems, step feeder screw feeding systems, blow-fed screw feeding systems, pick-and-place screw feeding systems, handheld auto-feed screwdrivers, robotic screw feeding systems, multi-spindle screw feeding systems, and integrated screw feeding and screwdriving stations. The 2025 benchmark ASP is US\$3,200 / set, shipment volume is 520k sets, and average gross margin is 41%. The upstream industry chain includes vibratory bowls, step feeders, rails, escapements, pneumatic valves, air tubes, motors, sensors, screwdrivers, tightening heads, PLCs, controllers, feeders, hoppers, jaws, nosepieces, slides, guide rails, cables, enclosures, and mechanical components. The midstream includes feeder design, screw sorting mechanism design, screw orientation control, blow-feed path design, jaw and nosepiece customization, torque tool integration, robotic interface design, anti-jamming design, cycle-time optimization, reliability testing, and workstation integration. The downstream includes electronics assembly, automotive components, appliance manufacturing, medical device assembly, aerospace components, furniture production, plastic parts assembly, metal products, electric tools, battery packs, consumer products, and general industrial automation.

Automated screw feeding systems are gaining demand as manufacturers seek faster assembly speed, lower labor dependence, and more consistent screw fastening quality. Manual screw picking and positioning can create bottlenecks, ergonomic burden, missing screws, cross-threading risk, and unstable takt time, especially in high-volume assembly lines. Automated screw feeding improves productivity by delivering screws continuously and consistently to the tightening point or pick-up position. Demand is supported by electronics miniaturization, automotive component automation, appliance assembly, medical device production, battery pack assembly, robot screwdriving, and flexible manufacturing. Product development is moving toward faster feeding speed, lower jamming rate, better compatibility with special screws, cleaner particle control, quick rail changeover, sensor-based screw presence detection, robot-ready interfaces, and integrated tightening data traceability.

This report studies the global Automated Screw Feeding System production, demand, key manufacturers, and key regions.
