According to our (Global Info Research) latest study, the global Automated Sorting Robots market size was valued at US\$ 1636 million in 2025 and is forecast to a readjusted size of US\$ 5995 million by 2032 with a CAGR of 20.3% during review period.

In 2025, global Automated Sorting Robots production reached approximately 0.11 million units, with an average global market price of around US\$ 15,000 per unit. Annual production capacity is 0.15 million units. Gross Profit Margin: 39%. Automated sorting robots are intelligent robotic systems designed to identify, classify, and route items to designated locations without human intervention, widely used in logistics, manufacturing, warehousing, and e-commerce fulfillment environments. The automated sorting robots industry chain consists of three main segments: upstream, midstream, and downstream. Upstream includes core component suppliers such as sensors, machine vision systems, AI chips, motors, controllers, and software algorithms, which provide the technological foundation for robot functionality. The midstream is composed of robot manufacturers and system integrators who design, assemble, and deploy automated sorting robots and integrated sorting solutions, often combining hardware with warehouse management and control software. Downstream covers end users across industries such as e-commerce, logistics and parcel delivery, manufacturing, retail, and airports, where these systems are implemented to improve sorting efficiency, accuracy, and operational scalability.
