## Abstracts

The global Automatic Cast Saw Device market size is expected to reach \$ 699 million by 2032, rising at a market growth of 6.4% CAGR during the forecast period (2026-2032).

In 2025, global Automatic Cast Saw Device production reached approximately 243.33 k units, with an average global market price of around US\$1,800 per unit.

The gross profit margin of major companies in the industry is between 30% – 50%.

In 2025, the global production capacity of automatic cast saw device was approximately 324.44 k units.

Automatic Cast Saw Devices are medical power tools used for removing orthopedic casts made from plaster or synthetic materials. They generate rapid oscillating motion rather than continuous rotation, allowing the blade to cut rigid cast material while reducing the risk of injuring soft tissue beneath. Advanced products may integrate suction, dust collection, low-noise motors, ergonomic handles, and speed control functions. These devices are mainly used in hospitals, orthopedic departments, emergency rooms, rehabilitation centers, and outpatient clinics, where efficient cast removal, patient comfort, safety, and reduced treatment time are important.

The industrial chain of Automatic Cast Saw Devices covers upstream components such as motors, oscillating mechanisms, saw blades, housings, batteries or power modules, vacuum units, filters, switches, and electronic control boards. The midstream includes product design, precision machining, electrical assembly, sterilization-compatible structure development, performance testing, safety verification, and final packaging.

Downstream applications mainly include hospitals, orthopedic clinics, emergency departments, rehabilitation institutions, and outpatient care centers. Related services include blade replacement, equipment maintenance, calibration, operator training, spare parts supply, warranty support, and periodic safety inspection to ensure stable cutting performance and clinical reliability.

Intelligent foundry production and automated metal processing requirements promote the technical iteration of automatic cast saw devices. The equipment realizes efficient cutting and shaping of castings, improving production efficiency and processing precision. Intelligent feeding and dust reduction design continuously optimize workshop operation environment.

This report studies the global Automatic Cast Saw Device production, demand, key manufacturers, and key regions.
