## Abstracts

According to our (Global Info Research) latest study, the global Automatic Chromatographic Separation Chromatograph market size was valued at US\$ 875 million in 2025 and is forecast to a readjusted size of US\$ 1470 million by 2032 with a CAGR of 7.8% during review period.

As a key analytical tool, chromatographic separation and analysis devices provide reliable technical support for analysis in the fields of scientific research, industrial production, and medical diagnosis. Its high resolution, high sensitivity and high efficiency make it an important tool for solving complex sample analysis problems. Through chromatographic separation and analysis devices, we can gain a deeper understanding of the composition, structure and properties of samples, providing strong support for promoting scientific progress and solving real-life problems.

The upstream of the automated chromatography separation chromatography instrument industry chain mainly includes suppliers of chromatographic packing materials and chromatography media, manufacturers of precision fluid control components, and suppliers of optical detectors and high-precision sensor chips, providing the core separation and detection foundation for the instruments and equipment. The midstream consists of automated chromatography separation chromatography instrument manufacturers and system integrators, responsible for the development of automated control systems, software algorithm optimization, and overall equipment manufacturing; this is the core technology and value creation link of the industry chain. The downstream is mainly used in biopharmaceuticals, vaccine production, protein purification, antibody drug development, and scientific research laboratories for the separation and purification of biological macromolecules. In terms of profitability, this

industry belongs to the high-tech barrier life science instrument industry, with gross profit margins typically ranging from 50% to 75%. Companies with independent chromatography media technology and automated control system capabilities have higher gross profit margins, reaching over 70%, while companies mainly engaged in equipment assembly and agency sales have relatively lower gross profit margins, generally around 50% to 60%.

In 2025, the average price of an automated chromatography separation analyzer will be US\$50,000 per unit, with sales of 17,000 units and a total production capacity of 25,000 units.

The wide application and continuous innovation of automatic chromatographic separation chromatographs provide powerful analytical tools for scientific research and industrial production. Its efficient, precise analysis capabilities and automated operations have greatly improved laboratory work efficiency and data quality. With the continuous advancement of technology, the functions and performance of automatic chromatographic separation chromatographs are also constantly improving, providing more possibilities for solving complex problems and exploring unknown areas.
