According to our (Global Info Research) latest study, the global Automatic Coax Stripping Machine market size was valued at US\$ 141 million in 2025 and is forecast to a readjusted size of US\$ 199 million by 2032 with a CAGR of 5.1% during review period.

In 2025, the global production of automatic coaxial cable stripping machines was approximately 6,280 units, with an average selling price of around US\$21,800 per unit. Individual manufacturers have a production capacity of approximately 200-500 units per year, with an average gross profit margin of 25-35%. Automatic Coax Stripping Machine is a highly automated cable processing device designed specifically for processing coaxial cables. It can perform precise processing operations such as cutting, multi-layer or multi-section stripping, and windowing in a single operation, without damaging the inner layer. Using a rotating cutter head and V-shaped blades, it efficiently and accurately strips the insulation and braid of coaxial cables. Suitable for the communications manufacturing and wire harness processing industries, it can store processing parameters for different cables and adjust stripping length and depth based on demand.

The upstream core supply chain for Automatic Coax Stripping Machine primarily includes suppliers of key components such as high-precision servo motors, motion controllers, vision sensors, and precision cutting tools. Their technical level and cost directly impact the performance of the equipment. Downstream, the machine closely serves manufacturers in the automotive electronics, 5G communication base station equipment, aerospace wiring harnesses, and high-end consumer electronics sectors.

The market for automatic coaxial cable stripping machines is showing a steady growth trend, driven particularly by the communications, electronics, and automotive industries, with demand increasing year by year. With the rapid deployment of 5G networks and the widespread adoption of smart devices, the application of fiber optic and coaxial cables in data transmission and communication equipment is becoming increasingly common, thus driving the market demand for high-precision stripping equipment. The main advantages of fully automatic coaxial cable stripping machines lie in their efficiency, precision, and high degree of automation, which reduce manual operation errors, improve production efficiency, and meet high requirements for accuracy and stability.

Furthermore, with technological advancements, especially the continuous upgrading of CNC and automation technologies, modern fully automatic coaxial cable stripping machines can now handle a wider variety of cable types, even demonstrating exceptional capabilities in processing more complex multi-layer coaxial cables. This has led to their increasingly widespread application in high-end communication equipment, automotive electronics, aerospace, and medical devices. The gradual decrease in equipment prices and the advancement of production line automation have also enabled small and medium-sized enterprises to utilize this equipment in their production processes.

However, the market still faces some challenges, including high initial investment and maintenance costs. Nevertheless, with the continuous maturation of technology and the strengthening global trend towards automation, fully automatic coaxial cable stripping machines are expected to become an indispensable core equipment in the manufacturing processes of various industries, offering promising market prospects.
