Automatic Cylindrical Grinding Machine is a modernized equipment integrating mechanical, electrical, hydraulic, and computer control technologies, designed to achieve efficient and high-precision grinding of workpiece surfaces through precise grinding wheels and positioning systems. This machine utilizes an automated control system to realize precise positioning and continuous grinding of cylindrical workpieces, significantly enhancing production efficiency and machining accuracy. It typically incorporates automatic loading and unloading devices, automatic measurement systems, and closed-loop control systems, enabling it to complete the entire grinding process without human intervention. The adoption of microcomputer intelligent control systems facilitates flexible processing, preventing tool breakage and ensuring the consistent quality of machined parts while optimizing surface roughness and geometric precision. In 2025, global Automatic Cylindrical Grinding Machine production reached approximately 5345 units with an average global market price of around k US\$200 per unit.

The future development trends of Automatic Cylindrical Grinding Machine will closely revolve around intelligence and automation upgrades. By integrating artificial intelligence and Internet of Things technologies, enterprises will drive equipment towards networking and intelligence, significantly improving production efficiency and machining accuracy, thereby enhancing profitability. Major industry trends include the continuous growth in demand for high-precision and high-efficiency processing, compelling enterprises to continuously improve grinding technologies to ensure strict

tolerances and surface finish, meeting the stringent requirements of high-end manufacturing for part quality. At the same time, with increasing environmental requirements, green manufacturing technology will become a core competitiveness, and enterprises will commit to developing energy-saving and consumption-reducing equipment to adapt to policy orientations and reduce operating costs. Furthermore, automation will become the key to reducing costs. By achieving automated modes where a single person oversees multiple machines, enterprises can effectively control labor costs and optimize production processes. The expansion of application areas will also bring new growth points for enterprises, extending from traditional manufacturing to emerging fields such as 3D printing and biomanufacturing, further expanding market space and optimizing revenue structures.
