The ?automatic doffing roving machine? is a spinning equipment mainly used to turn fiber strips into rovings. It improves production efficiency and yarn quality through automatic doffing. Doffing roving frame is divided into wing roving frame and twisting roving frame according to the form of twisting mechanism. The wing roving frame twists through the wing spindles, while the twisting roving frame twists through the twisting method. These machines usually have stable and reliable transmission systems and drafting systems to ensure the smooth progress of the spinning process. Automatic doffing roving frames are widely used in the textile industry, especially in ring spinning systems, which can realize automatic replacement of full and empty bobbins, improving production efficiency and yarn quality. It has a high degree of automation and can reduce quality defects such as yarn defects and hairiness caused by humans.
