According to our (Global Info Research) latest study, the global Automatic Door Control market size was valued at USD 1614.4 million in 2023 and is forecast to a readjusted size of USD 2007 million by 2030 with a CAGR of 3.2% during review period.

Automatic door control is widely deployed in public places like theatres, hotels, shopping malls, grocery stores and many others to eliminate the tedious job of opening the door manually.. Sensor based automatic door control technologies include ultrasonic/radio, infra-red and other wireless sensing methods. The automatic door control system is basically based on intention analysis and human detection. This is achieved with the assistance of a passive infrared sensor. A live body emits infrared energy which is sensed by the PIR sensor from a considerable distance. This sensed signal is transferred to a microcontroller which in turn operates the door motor. While the closure of the door is managed through a fixed time delay. Further, interrupt signals are controlled through limit switches to avoid locked rotor condition of the motor. Automatic door control is a widely used product especially in the developed economies to avoid human labor and workforce.
