## Abstracts

According to our (Global Info Research) latest study, the global Automatic Drug Dispensing Machines market size was valued at US\$ 1295 million in 2025 and is forecast to a readjusted size of US\$ 2166 million by 2032 with a CAGR of 6.1% during review period.

Automatic Drug Dispensing Machines are the core equipment for automating the dispensing of single-dose oral solid dosage forms in hospital pharmacies. Their core value lies in freeing pharmacists from tedious and repetitive manual medication dispensing, fundamentally changing the inefficient traditional "human-to-medicine" model. They work by seamlessly integrating with the hospital's information system to automatically receive and process electronic prescriptions. A single machine typically contains hundreds of smart pillboxes with individual codes, capable of storing hundreds of different tablets and capsules simultaneously, and using chips to automatically identify and manage their location and quantity. The fully enclosed operating environment effectively prevents secondary contamination of medications, while detailed information on the pillboxes satisfies patients' right to informed consent and improves medication adherence.

In 2025, global Automatic Drug Dispensing Machine sales reached approximately 1,470 K Units, with an average global market price of around 856 US\$/Unit. Production capacity reached 2,500 K Units, with a gross profit margin of approximately 35%.
