According to our (Global Info Research) latest study, the global Automatic Drug Sensitivity Analysis System market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

The automatic drug susceptibility analysis system is a medical device used for drug susceptibility testing and antibiotic susceptibility testing of pathogens. It can detect the antibiotic susceptibility of pathogens in a short period of time, thereby helping doctors choose appropriate antibiotic treatment options. The automatic drug susceptibility analysis system mainly includes sample processing module, bacterial culture module, antibiotic screening module, plate reading and analysis module and other components. Its workflow includes sample collection, preparation, inoculation, cultivation, drug sensitivity screening, and output of test results. Compared with the traditional manual drug susceptibility testing method, the automatic drug susceptibility analysis system is faster, more accurate and reliable, which can greatly improve the detection efficiency, shorten the detection time, and provide better services for the clinic.
