Automatic Egg Collection System is a mechanized and efficient solution used in poultry farming to automatically gather eggs from laying hens in a commercial egg production facility. This system is designed to replace manual egg collection, reducing labor costs, minimizing egg handling, and improving overall hygiene and egg quality.

The global market for automatic egg collection systems has been experiencing steady growth due to the increasing demand for poultry products, particularly eggs, driven by population growth and rising protein consumption. The United States and Canada have well-established markets for automatic egg collection systems, driven by large-scale commercial egg production operations and a focus on efficiency and animal welfare. European countries have been early adopters of automated poultry farming technologies due to labor costs and regulatory standards related to animal welfare. Countries like the Netherlands and Germany have robust markets. Growing demand for poultry products in countries like China and India has driven the adoption of automatic egg collection systems in the region, especially in large-scale commercial farms.
