## **Abstracts**

automatic generation control (AGC) is a system for adjusting the power output of multiple generators at different power plants, in response to changes in the load. Since a power grid requires that generation and load closely balance moment by moment, frequent adjustments to the output of generators are necessary.

Scope of the Report:

This report focuses on the Automatic Generation Control in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. The rise in integration of power resources will be one of the major trends that will gain traction in this market. Realizing the need to reduce GHG emissions, countries around the globe have started reducing their dependency on fossil fuel and started focusing on cleaner fuel sources such as nuclear and renewable energy. This addition of new resources will make electrical grids more complex and multidimensional. And as a result, companies will start using power control systems such as AGC which help in ensuring the stability of power grids.

The worldwide market for Automatic Generation Control is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
