## Abstracts

According to our (Global Info Research) latest study, the global Automatic Guided Vehicle Valet Parking System market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

An automatic guided vehicle valet parking system is unlike a mono-path system, which is limited to one lane of lateral movement along a steel rail. An automatic guided vehicle valet parking system employs robots that roll freely in any direction across solid concrete slabs (including underneath parked cars) enabling faster retrievals and the ability to work around obstacles, thereby increasing system redundancy. Vehicles are parked on platforms in transfer cabins which are then collected by AGVs that drive beneath the vehicle platform, lift it, then move it out of the transfer cabin and into the system. The number of AGVs in a system is flexible, based mostly on budget and throughput requirements.
