Abstracts

The global Automatic Guided Vehicle Valet Parking System market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

An automatic guided vehicle valet parking system is unlike a mono-path system, which is limited to one lane of lateral movement along a steel rail. An automatic guided vehicle valet parking system employs robots that roll freely in any direction across solid concrete slabs (including underneath parked cars) enabling faster retrievals and the ability to work around obstacles, thereby increasing system redundancy. Vehicles are parked on platforms in transfer cabins which are then collected by AGVs that drive beneath the vehicle platform, lift it, then move it out of the transfer cabin and into the system. The number of AGVs in a system is flexible, based mostly on budget and throughput requirements.
