According to our (Global Info Research) latest study, the global Audio Driver IC market size was valued at USD 2174.7 million in 2023 and is forecast to a readjusted size of USD 3759.6 million by 2030 with a CAGR of 8.1% during review period.

Audio driver IC, also known as switching amplifier or class-D amplifier is an electronic device in which the amplifying devices such as transistors act as switches and not as linear devices as in the case of other amplifiers. The analog signal is converted into a series of pulses with the help of pulse width modulation or pulse density modulation before it is applied to the driver/amplifier. The output pulse if passed through a low pass filter can be converted back to an analog signal.

In terms of geography, APAC dominated the global audio driver IC market during 2017 and is foreseen to continue its dominance during the forecast period as well.
