In 2025, the global production capacity of Automatic Laser Cleaning Equipment was approximately 19.61 k units.

Automatic Laser Cleaning Equipment is an industrial surface treatment system that uses high-energy laser beams to remove rust, paint, oil, oxide layers, coatings, and contaminants from metal or non-metal surfaces. It integrates laser sources, scanning heads, motion platforms, dust extraction, control software, and safety systems for automated, precise, and low-consumable cleaning.

The industrial chain of Automatic Laser Cleaning Equipment covers upstream components such as fiber lasers, optics, scanning heads, chillers, robots, control systems, sensors, protective enclosures, and dust collection units. The midstream consists of mechanical design, optical integration, automation programming, process testing, safety validation, and system assembly. Downstream applications mainly include automotive manufacturing, aerospace, rail transit, shipbuilding, molds, cultural relic restoration, electronics, and industrial maintenance.

Industrial surface rust removal, paint stripping and precision part cleaning demands accelerate the development of automatic laser cleaning equipment. It features non-contact cleaning, no material damage and environmental friendly advantages to replace traditional cleaning processes. Intelligent program setting and high-efficiency energy adjustment continuously expand industrial application fields.
