According to our (Global Info Research) latest study, the global Automatic Lubrication Pump market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

As long as the automatic lubrication pump is installed correctly and the lubrication time and cycle are set, it can work without sleep. The automatic lubrication pump has the incomparable advantages of the manual lubrication pump, and can truly achieve simple, convenient, reliable and safe lubrication. Industrial automation continues to evolve, and its application in machinery will continue to evolve.

Lubricating pump is a kind of lubricating equipment that supplies lubricant to lubricating parts. Mechanical equipment requires regular lubrication. Automatic lubrication pumps can replace manual lubrication, which can effectively reduce equipment failures, reduce energy consumption, improve production efficiency, and extend machine life. There are two types of automatic lubricating pumps: gear type and piston type. The gear pump has a large flow rate and low pressure, and the piston pump has high pressure but low flow rate.
