Abstracts

The global Automatic Magnetic Cell Sorter market size is expected to reach \$ 1849 million by 2032, rising at a market growth of 8.1% CAGR during the forecast period (2026-2032).

The fully automatic magnetic cell sorter is a device used to quickly and efficiently separate and purify target cells. It uses magnetic bead-labeled sorting technology and an automated operating system to accurately sort, enrich and separate cell samples. Through the action of the magnetic field, the system can quickly separate target cells from complex mixed cell populations. It is widely used in biotechnology, medical diagnosis, clinical research and other fields, providing important technical support for applications such as cell analysis, pathological diagnosis and gene therapy.

The fully automated magnetic cell sorting instrument industry chain mainly comprises three segments: upstream core materials and component supply, midstream equipment R&D and manufacturing, and downstream applications and services. The upstream segment provides key raw materials and components such as magnetic beads, microfluidic chips, sensors, precision pumps and valves, and control modules, with relatively low gross profit margins, generally between 20% and 35%. The midstream segment, the core segment, consists of the R&D, production, and software control system of the fully automated magnetic cell sorting instrument. Relying on procurement from research institutions and hospitals, it boasts higher gross profit margins, typically between 55% and 75%. Downstream applications cover basic research, stem cell research, immunotherapy, clinical sample processing, and drug screening, with gross profit margins of approximately 35% to 50%. Customized services for clinical and pharmaceutical companies can further enhance profit margins. Overall, the value of the industry chain is mainly concentrated in the midstream instrument manufacturing and

downstream value-added application segments.

In 2025, the average price of a fully automated magnetic cell sorting instrument was US\$300,000 per unit, with sales of 3,477 units.

The fully automatic magnetic cell sorter is an important technological innovation in the field of modern biomedicine. Its highly automated and precise cell sorting capabilities have brought great convenience and breakthroughs to scientific research and clinical diagnosis. By combining magnetic bead labeling and magnetic field sorting technology, these systems can achieve rapid, efficient and repeatable sorting of specific cells, providing key support for the development of fields such as cell therapy, immunotherapy and cancer diagnosis. Its advantages in improving experimental efficiency, reducing operational risks and improving sorting accuracy will further promote the progress of biomedical research and clinical applications, and make greater contributions to human health.
