Abstracts

Motor starters are one of the major inventions for motor control applications. As the name suggests, a starter is an electrical device which controls the electrical power for starting a motor. These electrical devices are also used for the purpose of stopping, reversing and protecting electric motors.

This report focus on Magnetic Motor Starters. This is the other main type of motor starter. It is operated electromagnetically. It means that the motor load connected to the motor starter is typically started and stopped using a lower and safer voltage than the motor voltage. Just like other motor starters, the magnetic starter also has an electrical contactor and overload relay to protect the device from too much current or overheating.
