The global Automatic Metallographic Grinding & Polishing Machine market size is expected to reach \$ 132 million by 2032, rising at a market growth of 2.9% CAGR during the forecast period (2026-2032).

In 2025, global Automatic Metallographic Grinding & Polishing Machine production reached approximately 23.2 k units, with an average global market price of around US\$4,522 per unit. Automatic metallographic grinding and polishing machine is an automated equipment for grinding and polishing metallographic samples. Automatic metallographic grinding and polishing machine is equipped with an automatic polishing head and features step-less speed changing and three-level constant speed for grinding and polishing. The working time can be preset and the rotating direction can be controlled. It can finish the whole process of rough grinding, fine grinding, rough polishing and finishing polishing for specimen preparation.

The global market for automatic metallographic grinding and polishing machines is advancing from semi-automation toward fully automated and intelligent workflows. Rising demands for efficiency and consistency in material testing from downstream sectors such as new energy vehicles, semiconductors, and aerospace are driving laboratory demand for unattended automatic systems. Equipment manufacturers are refining precision force control and multi-sensor fusion technologies to achieve closed-loop control of pressure, speed, and duration, minimizing operator-induced variability. Policy support for equipment upgrades and technical transformation in major manufacturing countries such as China creates a favorable environment for automation adoption. Regionally, Asia-Pacific, with its dense manufacturing activity and rapidly expanding emerging applications in semiconductors and battery materials, has become

the core growth area for automatic polishing machines, while Europe and North America focus primarily on intelligent upgrades of existing equipment. Overall, industry competition is shifting from single-device performance toward comprehensive solution capabilities encompassing automation integration and process optimization.
