In radio communications, an automatic microwave transceiver is an electronic device that is a combination of a radio transmitter and a receiver, hence the name. It can transmit and receive radio waves using an antenna for communication purposes. These two related functions are often combined in a single device to reduce manufacturing costs. The term is also used for other devices that can both transmit and receive through communication channels, such as optical transceivers that transmit and receive light in fiber optic systems, and bus transceivers that transmit and receive digital data in computer data buses.
