Abstracts

The global Automatic Motorcycle market size is expected to reach \$ 44216 million by 2032, rising at a market growth of 7.9% CAGR during the forecast period (2026-2032).

In 2025, the global production of automatic motorcycle reached approximately 7.87 million units, with an average global market price of around US\$3,200 per unit. In the same year, the global total production capacity of automatic motorcycle reached 9.83 million units. The industry average gross profit margin of this product reached 27%.

Automatic motorcycles are motorcycles capable of power transmission and gear shifting without requiring the rider to manually operate a clutch or gear-shift mechanism. These vehicles automatically select the optimal gear ratio based on factors such as engine speed, vehicle speed, load, and riding conditions, thereby enhancing riding convenience and comfort. Key automatic transmission technologies include CVT (Continuously Variable Transmission), DCT (Dual-Clutch Transmission), AMT (Automated Manual Transmission), E-Clutch systems, and the single-stage reduction drives used in electric motorcycles. Among these, CVT is widely used in scooters; DCT is primarily found in mid-to-high-end touring and adventure models; and AMT and electronic clutch systems are utilized in select specialized models. Thanks to advantages such as ease of operation, a lower barrier to entry for riders, high efficiency in urban commuting, and superior comfort on long-distance rides, automatic motorcycles have become a key growth area for the global motorcycle industry.

The automatic motorcycle industry chain comprises three main segments: upstream component supply, midstream vehicle manufacturing, and downstream sales and application. The upstream sector involves suppliers of core components such as engines, CVT transmissions, DCT systems, clutch assemblies, steel belts, pulleys,

ECUs (Engine Control Units), TCUs (Transmission Control Units), ABS systems, electronic throttles, electric motors, batteries, frames, tires, braking systems, and plastic bodywork. The midstream sector consists of vehicle manufacturers responsible for model R&D, powertrain integration, assembly, quality testing, and brand sales, covering categories such as scooters, cruisers, touring bikes, adventure bikes, and new energy automatic models. The downstream sector handles sales through brand dealerships, e-commerce platforms, direct-operated stores, and overseas agents. End-user segments include urban commuters, shared mobility platforms, logistics and delivery services, tourism and rental services, law enforcement agencies, and the personal recreational market. These are supported by maintenance and repair services, financing and insurance, used-vehicle trading, and after-sales support systems, collectively forming a comprehensive industry ecosystem.

The market for automatic motorcycles is poised for steady growth, driven by factors such as accelerating global urbanization, rising consumer demand for riding convenience, the proliferation of new energy motorcycles, and advancements in intelligent technologies. Asia—specifically China, Japan, India, and Southeast Asia—remains the largest consumer market globally, while markets in Europe and the Americas show a stronger preference for high-performance DCT models and intelligent automatic motorcycles. As technologies such as electronic controls, throttle-by-wire systems, intelligent rider-assistance systems, lightweight materials, and hybrid powertrains continue to mature, automatic transmission systems will further enhance gear-shifting efficiency, fuel economy, and the overall riding experience. Meanwhile, the continued expansion of the female rider demographic, the novice rider segment, and the shared mobility market will further drive the market penetration of automatic transmission models. In the coming years, automatic transmission motorcycles will increasingly evolve toward smart connectivity, electrification, premium positioning, and personalization, emerging as one of the fastest-growing segments in the global motorcycle industry.
