The global Automatic Plasma Cutter market size is expected to reach \$ 1387 million by 2032, rising at a market growth of 4.2% CAGR during the forecast period (2026-2032).

An Automatic Plasma Cutter is a metal cutting machine that uses a high-temperature plasma arc to cut conductive metals such as carbon steel, stainless steel, aluminum, copper, and alloy steel, while using CNC control, automatic motion control, torch height control, gantry movement, table movement, or robotic systems to reduce manual operation.

In 2025, global Automatic Plasma Cutter production reached approximately 96,095 units, with an average global market price of around US\$ 10,500 per unit.

The upstream supply chain includes plasma power sources, cutting torches, electrodes, nozzles, CNC controllers, servo motors, guide rails, transmission systems, steel frames, gas supply systems, software, electrical components, and consumables. The downstream market includes sheet metal fabrication, machinery manufacturing, automotive parts, shipbuilding, steel structures, construction machinery, agricultural machinery, metal furniture, advertising signage, and maintenance workshops.

The cost structure mainly consists of plasma power source, torch and consumables system, CNC control system, servo and transmission components, machine frame, gantry or table structure, electrical components, software, assembly labor, testing, packaging, logistics, and after-sales service.
