According to our (Global Info Research) latest study, the global Automatic Powder Coating Gun market size was valued at USD 83 million in 2023 and is forecast to a readjusted size of USD 116.3 million by 2030 with a CAGR of 5.0% during review period.

Powder coating is a dry coating process used as a metal finish mostly on industrial equipment. Powder coating is applied as dry powder through an electrostatic process, then cured with heat. It is well known for providing high-quality finishes in terms of both functionality and overall look. In contrast to wet painting, which also functions without electrostatics, powder coating requires electrostatics. The powder particles stick to the work piece through image charging. Powder particles, which have no charge, do not stick to the work piece and fall down. And there are two methods of charging: by ionization and by friction. This report focus on the powder coating gun that applied in the automatic powder coating systems.

The global top five automatic powder coating gun manufacturers include Gema (Graco), Wagner, Nordson, KCISPRAY, SAMES KREMLIN, accounting for more than 65% of the market share, of which the largest manufacturer is Gema (Graco) with a market share of over 25%.
