A automatic profile straightening machine is a type of industrial equipment used to straighten and align metal profiles or beams. It is commonly used in industries such as construction, manufacturing, and metalworking. The machine utilizes hydraulic or mechanical forces to apply pressure on the profile, gradually bending it back into a straight shape. This process helps to correct any deformations or misalignments that may have occurred during the manufacturing or handling of the profiles. Profile straightening machines are designed to handle various types and sizes of profiles, providing a precise and efficient method for straightening metal beams and profiles.
