## Abstracts

According to our (Global Info Research) latest study, the global Automatic Quantitative Nitrogen Blowing Concentrator market size was valued at US\$ 561 million in 2025 and is forecast to a readjusted size of US\$ 881 million by 2032 with a CAGR of 6.7% during review period.

In 2024, the global production of automatic quantitative nitrogen concentrators will reach 56,492 units, with an average selling price of US\$9,027 per unit. The automatic quantitative nitrogen blowing concentrator is a laboratory pre-treatment equipment that integrates automatic temperature control, quantitative concentration and multi-position processing. It uses inert nitrogen to purge the sample surface to accelerate solvent evaporation and achieve sample concentration and drying. The instrument can quantitatively concentrate multiple samples simultaneously by precisely controlling the gas flow, time and temperature. It is widely used in environmental monitoring, food safety, drug analysis and other fields. It is particularly suitable for processing volatile, toxic or heat-sensitive samples to improve experimental efficiency and result consistency.

Automated quantitative nitrogen concentrators, essential equipment for laboratory sample pretreatment, primarily utilize nitrogen flow and temperature control to rapidly evaporate solvents and concentrate samples. They are widely used in fields such as food safety testing, environmental monitoring, drug development, and life science research. Compared to traditional manual operations, these devices offer advantages such as high automation, rapid concentration efficiency, large throughput, and precise quantitative control, helping to improve overall laboratory analytical efficiency and result reliability. With increasingly stringent testing standards and the growing demand for high-

throughput experiments, the nitrogen concentrator market is experiencing steady growth. Going forward, manufacturers should continuously improve their technological innovation, product experience, and service offerings. Firstly, they should optimize temperature control systems, airflow distribution, and automated control algorithms to achieve higher precision, lower energy consumption, and safer operation. Secondly, they should focus on modular design and multi-channel functionality to meet the needs of diverse experimental scales and application scenarios. Furthermore, they should prioritize intelligent upgrades, integrating IoT remote monitoring and data management capabilities to facilitate laboratory information management. Furthermore, they should strengthen after-sales service and application training to help customers quickly get started and maximize equipment utilization. Only by continuously innovating in automation, intelligence, differentiation and service can manufacturers of automatic quantitative nitrogen concentrators stand out in the fierce market competition and achieve long-term sustainable development.
