The automatic reproductive secretion analysis system is a kind of medical equipment, which is used to test and detect the secretion of female reproductive system. It can help doctors understand women's reproductive health, diagnose reproductive system diseases, and provide treatment recommendations. The automatic reproductive secretion analysis system mainly includes sample pretreatment module, microscope imaging module, image analysis module and other components. Its workflow includes sample collection, preparation, microscope imaging, image analysis and other links. Compared with the traditional manual analysis method, the automatic reproductive secretion analysis system is faster, more accurate and more reliable, which can greatly improve the detection efficiency, shorten the detection time, and provide better clinical services.
