Abstracts

The global Automatic Rising Arm Barriers market size is expected to reach \$ 4 million by 2029, rising at a market growth of 5.2% CAGR during the forecast period (2023-2029).

The rising prevalence of car theft and road accidents has led to a growing demand for automatic arm barriers in public areas such as parking lots, airports, railway stations, and bus terminals. In addition, the wide usage of automatic arm barriers in toll plazas and border checkpoints for effective traffic management is anticipated to propel market growth over the forecast period.

Automatic Arm Barriers are commonly used to control traffic in various locations like parking lots, toll booths, and private driveways. These barriers consist of an aluminum or steel beam, which is raised and lowered by an electric motor, and a control unit that manages the barrier's operation
