An automatic rotary shoe injection molding machine is a specialized industrial machine designed for efficient, high-volume production of footwear. This machine uses injection molding technology to create shoe components, especially soles, by injecting molten material, typically rubber, EVA, PVC, or TPR, into molds. The machine has a rotary table with multiple mold stations (usually between 8 to 24). This rotating setup enables continuous operation, as one station injects while others cool and new materials are prepared, ensuring minimal downtime.
