An automatic nail feeder is a device used in industrial automated production that can automatically sort, transport and accurately deliver fasteners such as screws and bolts to designated workstations to facilitate subsequent assembly or tightening processes. The device is usually composed of a vibration plate, a feeding track, a sorting mechanism and a control system, which can achieve efficient and stable feeding operations, reduce manual intervention, and improve production efficiency and assembly accuracy. Automatic nail feeders are widely used in the fields of automobile manufacturing, electronic product assembly, and home appliance production. They are particularly suitable for scenarios that require large-scale, high-precision fastener assembly and are an indispensable auxiliary equipment in modern intelligent manufacturing.
