## Abstracts

According to our (Global Info Research) latest study, the global Automatic Screw Pump market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

An automatic screw pump is a type of pump that is used to move liquids or semi-solids through a system.

The pump consists of a screw that rotates inside a cylinder or tube. As the screw turns, it creates a vacuum at the inlet of the pump, which draws the liquid or semi-solid into the pump. The screw then forces the material through the pump and out the other end.

Automatic screw pumps are commonly used in the food, pharmaceutical, and chemical industries. They are particularly useful for pumping viscous or abrasive materials that would be difficult to move with other types of pumps.
