The global Automatic Semiconductor Chip Test Probe Station market size is expected to reach \$ 1001 million by 2029, rising at a market growth of 7.9% CAGR during the forecast period (2023-2029).

The automatic semiconductor chip test probe station is one of the important testing equipment in the semiconductor (including integrated circuits, discrete devices, optoelectronic devices, sensors) industry. It is widely used in the precision electrical measurement of complex and high-speed devices to ensure quality and reliability. , and reduce the development time and cost of the device manufacturing process. By cooperating with the test equipment, the probe station records the chips whose parameter characteristics do not meet the requirements, and removes them before entering the subsequent process, which greatly reduces the manufacturing cost of the device. The probe station is mainly used for applications such as wafer inspection, chip development and failure analysis in the wafer manufacturing process.
