Abstracts

The global Automatic Soft Pack Tissue Wrapping Machine market size is expected to reach \$ 501 million by 2032, rising at a market growth of 3.7% CAGR during the forecast period (2026-2032).

In 2025, global Automatic Soft Pack Tissue Wrapping Machine production reached approximately 24,130 units with an average global market price of around US\$ 15,000 per unit, and a gross profit margin of approximately 20%-40%. Automatic Soft Pack Tissue Wrapping Machines are high-speed packaging systems designed to wrap facial tissue stacks into flexible soft packs using PE, BOPP, or recyclable mono-material films. They automate tissue infeed, counting and compression, film forming, longitudinal and end sealing, perforation or easy-open features, and discharge to downstream bundling or case packing. Soft-pack formats require precise compression control to protect tissue softness while achieving stable pack shape and tight sealing. Key requirements include gentle handling, low dust sensitivity, accurate stack positioning, stable sealing temperature control, fast size changeover, and high OEE on continuous converting lines. These machines are widely used in FMCG tissue plants to match higher converting speeds and improve hygiene and pack consistency.

The industrial chain of Automatic Soft Pack Tissue Wrapping Machines includes upstream components such as frames, servo motors, vacuum conveyors, belts, sensors, PLC/HMI, sealing heaters, temperature controllers, pneumatic modules, cutting knives, film unwinders, and safety systems. Midstream manufacturing covers mechanical assembly, electrical integration, software programming, motion tuning, sealing validation, performance testing, and factory acceptance tests. Downstream users include tissue manufacturers, hygiene product converters, and contract packaging plants. Services include installation, line integration, change parts supply, training,

preventive maintenance, and spare parts support.

The Automatic Soft Pack Tissue Wrapping Machine market is supported by stable tissue consumption and continuous upgrades of high-speed converting lines, where packaging is increasingly the throughput bottleneck. Soft packs remain the mainstream for facial tissues in many regions due to low material cost and efficient logistics, pushing demand for reliable, high-OEE wrappers. Buyers prioritize gentle handling, sealing consistency, fast changeover, and film-saving features such as optimized tension control and downgauging compatibility. Trends include more servo-driven motion for precision, integrated inspection for seal defects and missing tissues, and seamless integration with bundlers and case packers. Sustainability is reshaping specifications, with recyclable mono-material films and reduced plastic targets requiring wider sealing windows and better process control. Constraints include capex sensitivity among smaller mills, variability in film quality, and the need for strong maintenance skills to keep high-speed lines stable. Overall, growth is steady, driven by automation, premium pack appearance, and efficiency pressure.
