Abstracts

The global Automatic Stirrup Benders for Coil market size is expected to reach \$ 755 million by 2032, rising at a market growth of 5.2% CAGR during the forecast period (2026-2032).

In 2025, global Automatic Stirrup Benders for Coil production reached approximately 7,600 units, with an average global market price of around US\$ 68,000 per unit. The gross profit margin of major companies in the industry is between 20% – 45%. Automatic Stirrup Benders for Coil are automated rebar processing machines that unwind coil steel, straighten it, and bend it into closed or open stirrups, hoops, and complex reinforcement shapes for concrete construction. Using servo-driven feeding, CNC bending heads, and programmable shape libraries, they produce high-precision stirrups with consistent angles and dimensions, supporting high-throughput prefabrication. These machines can integrate automatic cutting, length measurement, and stacking systems to reduce labor and improve material utilization. They are widely used in precast plants, rebar fabrication centers, and construction projects requiring large volumes of standardized stirrups for beams, columns, slabs, and infrastructure.

The industrial chain of Automatic Stirrup Benders for Coil includes upstream components such as coil steel, straightening rollers, feeding servos, reducers, bearings, sensors, encoders, CNC controllers, bending pins, cutting blades, hydraulic/pneumatic units, electrical cabinets, and safety guards. Midstream manufacturing integrates mechanical structure, straightening and feeding modules, bending and cutting units, motion control software, and stacking conveyors, followed by calibration and endurance testing. Downstream users include precast concrete factories, rebar processing centers, contractors, and infrastructure builders. Services include installation, operator training, tooling supply, software updates, and maintenance.
