Abstracts

The global Automatic Strip Packaging Machine market size is expected to reach \$ 743 million by 2032, rising at a market growth of 7.1% CAGR during the forecast period (2026-2032).

In 2025, global sales of automatic strip packaging machines reached 16,800 units, with an average selling price of US\$26,500 per unit. Total production capacity was approximately 21,500 units, and the gross profit margin remained at 38%. Automatic strip packaging machines are automated equipment that automatically measures, fills, seals, and produces small strip packages from powders, granules, liquids, or pastes. They can continuously complete processes such as bag making, filling, heat sealing, cutting, and counting, featuring high packaging speed, high measurement accuracy, high material utilization, and high hygiene standards. They are widely used in the production of single-use, small-dose products.

Upstream material consumption includes stainless steel structural components, servo motors, PLC control systems, pneumatic components, photoelectric sensors, packaging film conveying assemblies, and human-machine interface modules. Downstream consumption is mainly used in the packaging of food and beverages, pharmaceuticals and health products, daily chemical products, coffee and solid beverages, condiments, and functional nutritional products.

Future development focuses on intelligent control, high-speed multi-row packaging, remote operation and maintenance, and digital production management to meet the needs of personalized packaging, small-size packaging, and flexible manufacturing. With the increasing demand for ready-to-eat consumer goods, functional foods, single-dose pharmaceutical packaging, and cross-border e-commerce products, market

demand continues to expand, and the upgrading of high-speed intelligent packaging equipment and automated production lines will bring new market opportunities.

The automatic strip packaging machine market has maintained steady growth, primarily driven by the expansion of the food and beverage, pharmaceutical and health product, daily chemical, and functional nutritional product markets. As consumer demand for portable, small-package, and single-use products increases, strip packaging, with its advantages of convenience, precision, and hygiene, is widely used in coffee powder, probiotics, collagen, oral liquids, condiments, and personal care products. Simultaneously, brand owners' increasing demands for packaging efficiency, product consistency, and production automation levels are further fueling market demand for automatic strip packaging machines.

In the future, automatic strip packaging machines will evolve towards intelligent manufacturing and digital factories, with enhanced integration of equipment with production management systems such as MES and ERP. Meanwhile, the application of sustainable packaging materials, energy-saving design, high-speed multi-channel production, and remote monitoring and maintenance technologies will become important industry trends. With the continued expansion of the functional food, health product, pharmaceutical single-dose packaging, and personalized consumer goods markets, the application depth of automatic strip packaging machines in the food, pharmaceutical, and daily chemical industries is expected to further increase, resulting in a relatively optimistic overall market outlook. High-end intelligent equipment and complete automated production line solutions will be key areas for future growth.
