According to our (Global Info Research) latest study, the global Automatic Syringe Disabling market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

Auto-disable syringes like the auto-disable syringe are designed to be used only once, with a mechanism in the barrel that depresses the plunger once, creating a barrier that prevents it from being depressed again. Another type of syringe that prevents reuse is one that automatically splits when the plunger is fully depressed, making a second use impossible. In both types of syringe, the mechanism to prevent reuse is only activated when the plunger is fully depressed.
