Abstracts

The global Automatic Tire Inflation System market size is expected to reach \$ 5087 million by 2032, rising at a market growth of 8.2% CAGR during the forecast period (2026-2032).

Automatic tire inflation systems (ATIS) work to overcome one or more of the causes of tire underinflation by monitoring tire inflation pressure relative to a pre-set target and re-inflating tires whenever the detected pressure is below the target level. The tire inflation system not only increases vehicle mobility and reliability when moving, it also helps to ensure that a need for vehicle recoveries is avoided as far as possible. It also prevents unnecessary damage to fields. Moreover, simple adjustments to correct the air pressure ultimately reduce tire wear.

PSI monopolizes the global Automatic Tire Inflation System market, holding a share about 66%.

North America is the largest market, with a share about 55%, followed by Europe, have a share about 40 percent.
