According to our (Global Info Research) latest study, the global Automatic Training External Defibrillator market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

An Automatic Training External Defibrillator (ATED) is a device used for training purposes to simulate the operation and use of an actual automated external defibrillator (AED). It is designed to provide realistic training scenarios for individuals to learn how to respond to sudden cardiac arrest situations. The ATED usually replicates the user interface, visual and auditory prompts, and CPR feedback of an actual AED, allowing trainees to practice proper placement of pads, perform simulated CPR, and understand the correct steps to follow during emergency situations.

The industry trend of Automatic Training External Defibrillator is towards enhanced realism and interactivity. As technology advances, there is a growing demand for training devices that provide more realistic experiences. This includes features such as realistic voice prompts, accurate simulation of cardiac rhythms, and interactive feedback on the performance of CPR. Additionally, there is a focus on incorporating connectivity features to track trainee progress and provide comprehensive training reports. These trends aim to improve the effectiveness of training and ensure that individuals are well-prepared to respond to sudden cardiac arrest incidents.
