According to our (Global Info Research) latest study, the global Automatic Transdermal System market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

The automatic transdermal system is to test the decomposition and diffusion of transdermal drugs or cosmetics under controlled conditions under specified environment and conditions, so as to simulate the in vivo absorption process of the test substance.

Compared with traditional medication methods, the advantages of transdermal drug delivery systems are the main reason for the rapid development of the market. In addition to effectively avoiding the first-pass effect of the liver, transdermal administration can reduce the irritation of the stomach and intestines caused by oral drugs and reduce the loss of drug efficacy. The way of injecting drugs will also bring great inconvenience and secondary damage to the body, reducing the risk of damage to patients. dependency. Growth in the pharmaceutical industry, increasing number of patients with chronic diseases, etc. are likely to contribute to the growth of the transdermal drug delivery market.
