The global Automatic Transmission Filter market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The automatic transmission filter is a component of the automatic transmission system in the vehicle. It is designed to filter contaminants and debris in the transmission fluid to prevent damage to the transmission and maintain smooth operation. The automatic transmission filter is usually located in the transmission oil pan and consists of filter element and filter housing. The filter element is usually made of paper or other porous materials, which will retain particles and debris when transmission fluid flows through the filter element. The filter housing is designed to protect the filter element and hold it in place.
