According to our (Global Info Research) latest study, the global Automatic Transmission Gear Lever market size was valued at USD 11770 million in 2022 and is forecast to a readjusted size of USD 19730 million by 2029 with a CAGR of 7.7% during review period.

The automatic transmission gear lever is a device for changing the running speed of the vehicle. It adopts gear transmission and has several fixed value transmission ratios.

Automotive is a key driver of this industry. According to data from the World Automobile Organization (OICA), global automobile production and sales in 2017 reached their peak in the past 10 years, at 97.3 million and 95.89 million respectively. In 2018, the global economic expansion ended, and the global auto market declined as a whole. In 2022, there will wear units 81.6 million vehicles in the world. At present, more than 90% of the world's automobiles are concentrated in the three continents of Asia, Europe and North America, of which Asia automobile production accounts for 56% of the world, Europe accounts for 20%, and North America accounts for 16%. The world major automobile producing countries include China, the United States, Japan, South Korea, Germany, India, Mexico, and other countries; among them, China is the largest automobile producing country in the world, accounting for about 32%. Japan is the world's largest car exporter, exporting more than 3.5 million vehicles in 2022. Thanks to advances in automatic shift transmission systems, automakers can improve the fuel efficiency of their vehicles. Compliance with corporate average fuel economy (CAF?) standards and growing concerns about environmental degradation due to emissions are likely to drive the demand for automatic transmission systems, which is expected to drive the growth of the automotive shifting systems market. Technological advances are

helping automotive shift system manufacturers create sophisticated shift systems that can automatically adjust to the driving environment and provide optimum performance for the vehicle. Growing demand for passenger vehicles across the globe is driving the global automotive transmission system market forward. Technological advancements are playing a vital role in the automotive sector, and the use of electronic transmission systems has increased compared to manual transmission systems. Governments around the world have enacted strict laws and regulations to encourage automakers to adopt energy-efficient and emission-efficient components. These reasons are driving the growth of the global automotive shifting systems market. Car shifting systems provide excellent control to allow you to operate your car properly. As a result, many automakers are moving to shift-by-wire systems, especially in electric vehicles, increasing the demand for push-button shifter technology. This innovation replaces mechanical linkages, providing consumers with smoother transitions between gears. These qualities are expected to drive the global automotive transmission systems market forward. Thanks to the introduction of new and better techniques for testing and monitoring the performance of automotive gear shifting systems, manufacturers and end users can now evaluate and make required modifications. Advanced testing methods designed to aid in the creation of unique shift mechanisms and torque systems are expected to enable automakers to meet changing customer demands while still complying with new regulatory requirements. Advances in additive manufacturing and powder metallurgy technologies are expected to Driving the growth of the automotive shifting systems market.
