The global Automatic Ubbelohde Viscometer market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

An Automatic Ubbelohde Viscometer is a type of viscometer used to measure the viscosity of fluids, such as oils and polymers. It works by using a thin capillary tube through which the fluid flows under gravity. The time taken for the fluid to flow through the tube is measured and used to calculate the viscosity of the fluid. The Automatic Ubbelohde Viscometer is called 'automatic' because it is designed to automate the measurement process and reduce human error. It has features like automatic sample loading, temperature control, and digital display of results, which make it very easy to use and accurate in viscosity measurement.
