Abstracts

The global Automatic Valet Parking Robot market size is expected to reach \$ 1210 million by 2032, rising at a market growth of 14.6% CAGR during the forecast period (2026-2032).

Automatic Valet Parking Robot is an intelligent parking solution designed to enable fully automated valet-style vehicle handling, managing vehicle pickup, transfer, positioning, and parking space allocation within structured parking facilities without human intervention. It integrates sensing systems, autonomous navigation and positioning algorithms, motion control, centralized parking management software, and mechanical lifting modules to support seamless vehicle intake and dispatch processes in complex parking environments. Compared with traditional AGV-based systems, it emphasizes user-end automation and service-oriented operation, improving convenience, operational efficiency, and system responsiveness in high-density urban scenarios. Its advantages include seamless user experience, flexible deployment, high space utilization efficiency, reduced labor dependency, improved vehicle turnover rate, and enhanced operational safety through automated control systems. In 2025, the capacity utilization rate was about 70%, and the average gross margin was approximately 20%. Production in 2025 was 16071 units with an average price of 28000 USD per unit. The upstream segment includes servo motors, batteries, drive units, and controllers, with representative suppliers including Siemens, Bosch, Panasonic, Mitsubishi Electric, Inovance Technology, and CATL. The midstream segment focuses on valet parking system integration, autonomous navigation and control algorithm development, robotic structure engineering, and parking management platform integration. The downstream segment is primarily concentrated in public parking facilities and commercial parking operators, with representative customers including Prologis, Simon Property Group, Brookfield Properties, and China Resources Land.
