According to our (Global Info Research) latest study, the global Automatic Wafer Laser Cutting Machine market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

With the rapid development of the optoelectronic industry in recent years, the demand for high-performance semiconductor wafers continues to grow. Materials such as silicon, silicon carbide, sapphire, glass, and indium phosphide are widely used in semiconductor wafers. With the greatly increase in wafer integration, wafers tend to become lighter and thinner, and many traditional processing methods are no longer applicable. Laser belongs to non-contact processing, does not produce mechanical stress on the wafer, and has less damage to the wafer, so it is gradually introduced into semiconductor wafer cutting.

Automatic wafer laser cutting machine is a high-precision machine used to cut wafers using laser technology.
